Phonak Naída Paradise

Phonak Naída has a long history of groundbreaking innovation focused on helping persons with severe to profound hearing loss. The latest generation of hearing aids, Naída Paradise, offers an unrivalled powerful hearing experience to help you communicate, connect socially and thrive emotionally. It features:

- Next level, powerful sound
- Connects to smartphones, TV and more
- Empowering smart apps

Naída P-PR

Mild to moderately-severe
hearing loss

Naída P-UP

Severe to profound hearing loss

Chestnut

Champagne

Silver Gray

Graphite Gray

Next level, powerful sound

Your hearing needs are as unique as you are; and you are interested in more than just power.

Naída Paradise goes beyond pure power to truly elevate the sound for each person. It allows for personalisation and has attention to detail built into every aspect. Combining new hardware and software, it automatically responds to every listening situation.

New features

Leveraging the audiological expertise of Phonak as well as artificial intelligence, Naída Paradise introduces a range of new features:

Speech Enhancer

Understanding someone who is speaking softly or speaking from a distance in a quiet environment is often a challenge for persons with more severe hearing loss. This feature is designed to help you hear soft speech in quiet situations.

Dynamic Noise Cancellation

Hearing in noisy situations is a challenge. This feature improves signal-to-noise ratio and can be adjusted to personal preference using the myPhonak app.

Motion Sensor Hearing

Having a conversation with someone, especially while walking, can be difficult. When in a noisy environment, such as a busy street, it becomes even more challenging. Naída P-PR is equipped with a new motion sensor that can detect if you are moving. Motion Sensor Hearing leads to a better speech understanding and a better overall listening experience while on the go.¹

Connects to smartphones, TV and more

Universal connectivity means that Naida Paradise connects to your iOS®, Android™, or other Bluetooth®-enabled devices so you can stream audio directly to your hearing aids.

Hands-free calls let you answer or reject calls with the simple push of the multi-function button, even if your phone is across the room. When you speak, the hearing aids detect your voice and send it back to the phone.

Multiple Bluetooth connections offer you a seamless listening experience, for example when listening to music and then switching to an incoming call. Up to eight Bluetooth-enabled devices can be paired and you can easily alternate between two simultaneously connected devices.

Tap Control is enabled through the motion sensor in Naida P-PR. You can accept phone calls, hang up and even switch between devices — simply by double tapping your ear. You can also play or pause music, stop or resume streaming and activate Bluetooth-based voice assistant apps.

iOS is a trademark of Cisco Technology, Inc.

Android is a trademark of Google LLC.

Empowering smart apps

It's not just another app – it's the smart way to control your hearing aids, access useful features and personalise your settings. Download the **myPhonak app** (App Store or Google Play) and get the most out of your hearing aids.

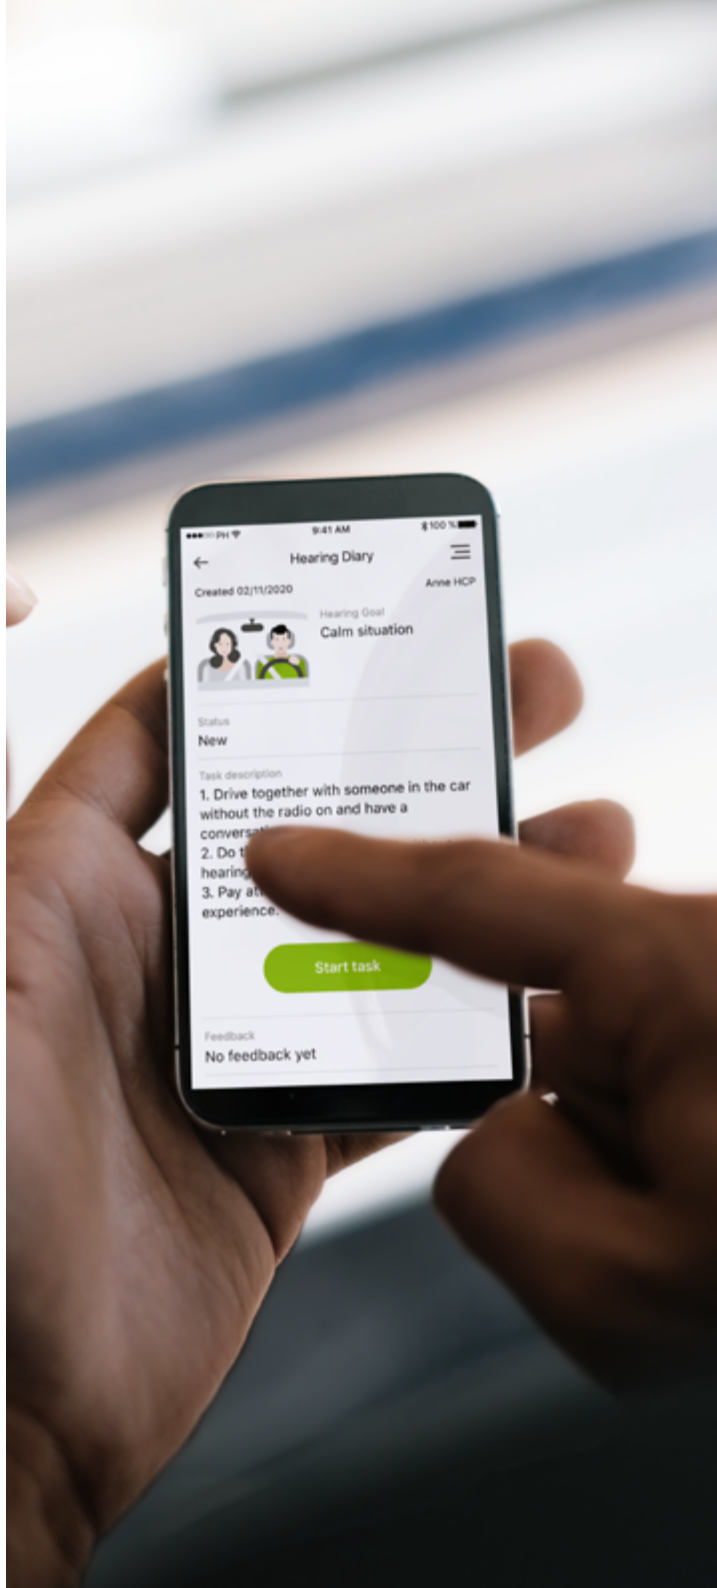

Remote Control allows you to adjust and control your sound settings on the go. You can also switch between programs or create custom programs for specific listening situations. Thanks to **myPhonak Memory**, the last used custom program can now be saved to the hearing aid and accessed using the multi-function button.

Remote Support allows your hearing care professional to adjust your hearing aids remotely in real-time. This is helpful in situations where you cannot make it for a personal consultation or when you want to optimise your hearing aid settings in real-life situations.

Finally, the myPhonak app helps you keep track of your hearing experience. It shows usage information, indicates battery level, allows you to share data** and give feedback to your hearing care professional. You can also manage pairings with other devices; and configure Bluetooth phone calls and the Tap Control feature.

Naída Paradise and Roger™ combine the best of two worlds for listening in noise and over distance

There will always be listening situations that are particularly challenging. This is especially true when combining a noisy situation with distance. Another example is when the speaker is wearing a face mask and you do not have the additional support from lip reading. This is where **Roger technology** can help.

Roger remote microphones from Phonak help you understand more speech in noise and over distance.² They can stream directly to Naída Paradise hearing aids without the need for attaching or wearing external receivers.* If the surrounding noise level increases, Roger adapts accordingly, keeping the speaker's voice above the background noise.

For many people with hearing loss, the combination of hearing aids and Roger helps them to lead socially active and professionally fulfilling lives.

* RogerDirect™ requires the installation of Roger receivers into the Phonak hearing aids, by means of a Roger X receiver or a Roger iN microphone.

² Thibodeau, L. (2014). Comparison of speech recognition with adaptive digital and FM wireless technology by listeners who use hearing aids. *American Journal of Audiology*, 23(2), 201–210.

Get to know our latest remote microphone!

Roger On™ is a new microphone dedicated for all conversations where background noise is present or where there is distance to the speaker. It is designed for versatility and ease of use and can be worn by the person speaking or placed on a table. With its ability to distinguish the direction of incoming speech and a pointing feature, it gives you the flexibility to focus on the conversations that truly matter at work, in lectures and during social activities.

Ask your hearing care professional for a demo or visit phonak.com/au/en/hearing-aids/accessories/roger to learn more about Roger!

Take the first step to improve your overall well-being with Phonak Paradise

When you hear well, you are well equipped to embrace the life you want. Growing evidence shows that treating hearing loss can positively impact your social-emotional, cognitive and physical well-being.¹

Social-emotional well-being

Hearing well allows us to be socially active, connect with others and communicate effectively – without barriers.

Cognitive well-being

The brain plays a crucial role in listening and speech understanding – it's important to keep it stimulated. That's where hearing aids come into play.

Physical well-being

Hearing well provides you with greater environmental awareness, fostering feelings of security and confidence.
