

Enhanced fitting **experience**

Your fitting experience matters. We're introducing a suite of improvements designed to make your everyday fittings easier and faster. With updates to both software and hardware, you can spend your time in the clinic how you want.

Exchangeable mic filters

Aligned hearing aid basics

We're expanding the options for servicing our hearing aids in-clinic so your clients can continue to enjoy their hearing day after day.

Sometimes the least glamorous pieces of the hearing aid can make the biggest impact to your day-to-day clinical practice.

We're aligning domes and receivers to SureFit 3 as well as aligning wax and mic filters on Receiver-in-Ear (RIE) and Super Power Behind-the-Ear (SPBTE) devices in our newest portfolio additions[1]. Microphone filters will also be exchangeable, so you can keep more care in your clinic.

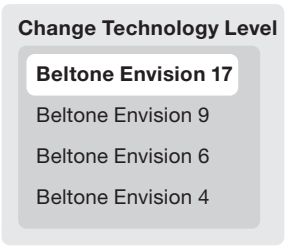

Flexible demo devices

Let your clients experience the difference

Support your counselling with our new range of flexible demo devices, that can be changed in the software with just 2 clicks[2]. This allows you to showcase different technology levels to clients and let them hear the difference[3].

The flexible demo device allows your clients to explore various tech levels without the need to replace their physical hearing aids. This not only enhances your clients' experience but also reduces your workload – there is no need to search for new hearing aids or manage a large inventory.

- Choose preferred tech level
- Apply to hearing aids
- Let your clients hear the rest for themselves

Beltone™

Updated
Beltone Solus Max

Enjoy a smarter and more intuitive software

With Beltone Solus Max 2.0, we started our fitting software evolution with you, the hearing care professional, in focus. Now we're updating to Beltone Solus Max 2.2 with interface improvements, faster access to onboarding reports and more.

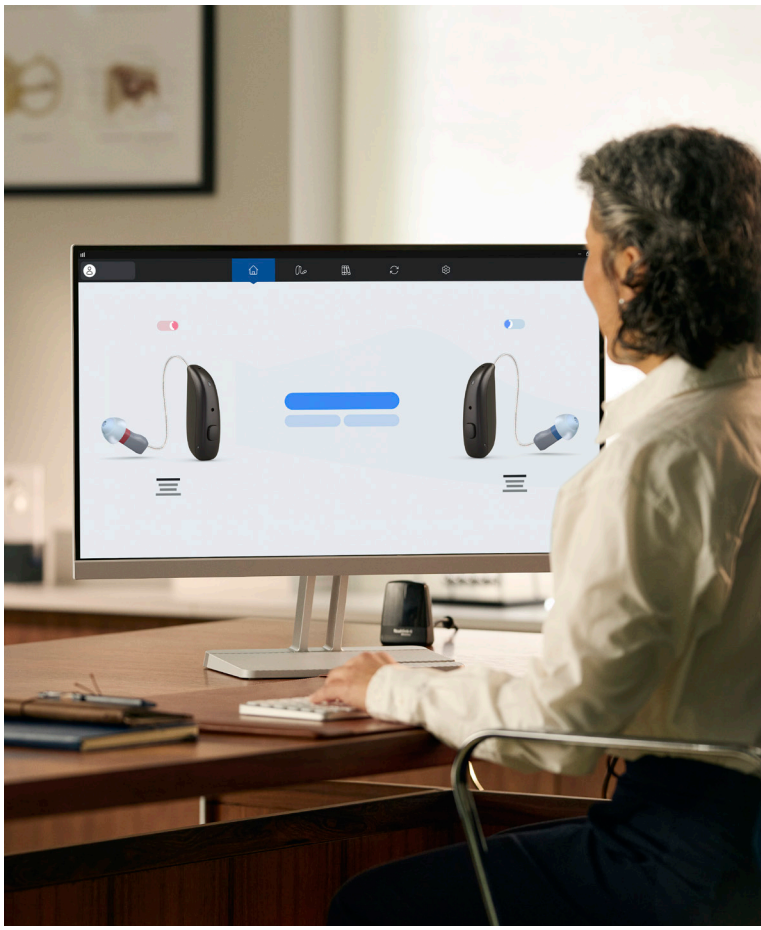

The journey to faster fittings

What would you use 1 minute and 19 seconds on? That's the amount of time saved in fittings on average[3]. With each client being fitted more efficiently, you will get more time to do what matters to you – whether it's care, ordering, or maybe just getting some breathing space.

The improvement to our fitting software is a journey, and with the update to Beltone Solus Max 2.2 we've taken the next steps in creating an even more intuitive and easy experience for you.

With Beltone Solux Max 2.2 you get:

- Improved user interface for an effortless flow
- Detect and fit hearing aids connected to Bluetooth®
- Accessible and improved onboarding with client report information in Noah
- Easy phone compatibility check through QR-code scanning directly in the software
- Faster and more streamlined firmware updates by updating both hearing aids at the same time[1]
- Our most comprehensive setup for standard verification and directionality testing with a fast and seamless process[4]
