Find the right **hearing solution for you**

For professionals

Beltone

Finding the right hearing **solution for you...**

… starts with understanding your daily hearing challenges, surroundings and preferences. Because everyone spends their time differently, understanding your everyday is critical when choosing a solution that will support you in your favourite activities.

A) How affected are you and your surroundings by your hearing loss?

1. How important is it for you to improve your hearing right now?

0 — 10

The scale goes from: "0 = not at all" to "10 = very much"

2. How does your hearing limit you in doing what you want to do?

0 — 10

The scale goes from: "0 = not at all" to "10 = very much"

3. How does your hearing ability affect your social life?

0 — 10

The scale goes from: "0 = not at all" to "10 = very much"

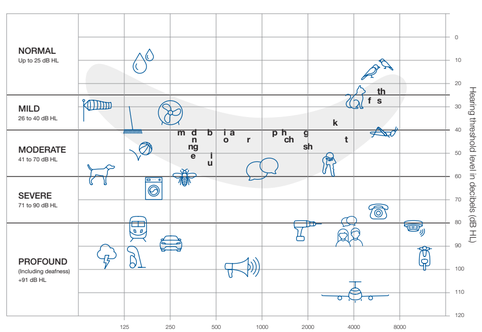

4. How does your hearing ability affect your professional life?

0 — 10

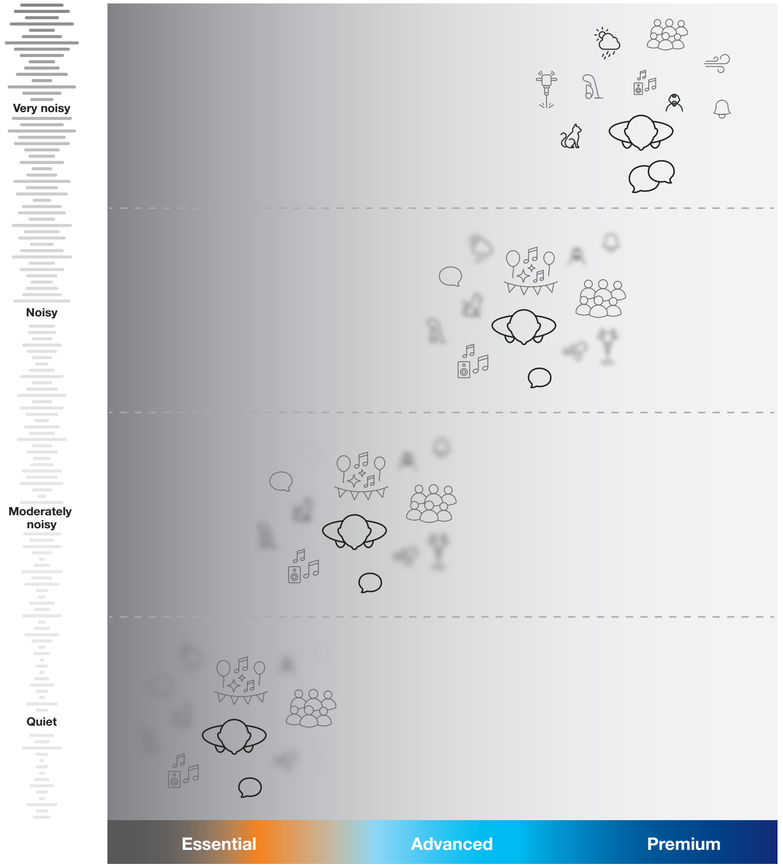

The scale goes from: "0 = not at all" to "10 = very much"

B) Understand your hearing profile through your audiogram

The figure depicts the sounds of daily life and locates those sounds where they typically fall relative to pitch and loudness. Frequency (pitch) is measured on the x-axis, while sound intensity (loudness) is measured on the y-axis. Letters on the graph denote common sounds of speech. The banana shape area shows the pitch and loudness of these common speech sounds.

C) Your everyday noise determines your needs

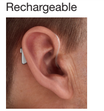

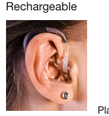

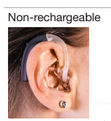

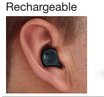

The amount of noise you experience in your daily life is one of the deciding factors when choosing a hearing aid. This diagram illustrates how you can benefit from having more advanced features that boost clarity and unblur conversations in noisier environments.

As you move through the tech levels, from Essential to Advanced and Premium, the greater the degree that noise is reduced, speech is highlighted, and sound is crystal clear.

At the ultimate level – Premium – you will experience a radiant sound picture, where you still have access to important noises, but speech is contrasted, enabling you to enjoy greater clarity in your listening experiences.

D) Match your style to your hearing needs

	Supporting	Styles	Charger options
Receiver-In-Ear (RIE)	• Mild to severe hearing loss • All ear canal types • Hear more naturally • Discreet	Rechargeable  microRIE 62S · miniRIE 62 · RIE 63 Non-rechargeable  RIE 63 312 battery RIE 64 13 battery	 Premium charger  Standard charger  Desktop charger
