

Bring your best

care to every client with Beltone

Exceptional hearing care goes beyond innovative technologies. It's about delivering life-changing clarity for every client, with a partner who's always here for you. The latest Beltone Portfolio has been thoughtfully designed for your business, your practice and your clients.

For your business

That magic moment when your clients experience better hearing becomes easier to achieve when you have the latest hearing technology to hand and options to cover different needs.

Optimal solutions for your clients

Find the right fit across fully upgraded Premium and Essential families, covering a range of styles at every technology level, including specialised offerings such as Super Power BTE and leading CROS, meaning all your clients can enjoy the latest hearing aid technology.

Audible differences you can demonstrate

Help your clients hear the value of different hearing aid options with our Flex Demo devices covering all tech levels and families. Quickly showcase different tech levels in less than 10 seconds[1] and let your clients experience our premium features for themselves.

For your practice

From our fitting software down to our accessories, get the tools and support you need to simplify your day-to-day and support your preferred way of working, because you change lives.

Easier, faster, better fittings

With the Beltone Solus Max™ 2.4 update, everything just got easier – simpler navigation, faster access to features, and built-in support for NAL-NL3™, alongside BAFA to fit the way you prefer and provide a truly personalised listening experience to your clients.

Fewer returns, greater control, more care

Discover unified hearing aid parts, including aligned receivers and AllFit domes that are fully backward compatible across all families, making it easier manage care and maintenance. And reduce service returns by up to 40% with exchangeable mic filters[1] to keep hearing aids where they belong – on your clients' ears.

Beltone™

For your clients

We create Beltone solutions using a human approach to AI, rooted in our Organic Hearing™ philosophy. Our AI-powered platform and DNN technology are designed to support what the brain instinctively does, so hearing sounds and feels more natural. Offer this technology in the world's smallest AI hearing aids[2], delivering proven clarity in noise, all-day battery and Auracast™ broadcast audio, across mild to profound hearing loss and single-sided deafness.

Make life sound natural automatically

We know clients want a wear-and-forget solution – one that lets them hear clearly without thinking about their hearing aids. That's why our latest DNN denoising technology is now available across more programs and tech levels, delivering clearer conversations, lower listening effort and a more natural hearing experience automatically.

Industry-leading clarity and connectivity

Our leading AcoustIQ™ sound-sensing technology for accurate classification and feature engagement, our unique beamforming strategies and Auracast connectivity are available across all hearing aid families, bringing advanced sound performance to every client.
